

Rogier's Kweeklijst 2010

Planten zijn gecategoriseerd in geslacht (bijv. *Sarracenia*); soort (bijv. *flava*) en eventueel als variëteit (bijv. *var. rubricorpora*). Elke verschillende plant is uniek en wordt kloon genoemd. Elke kloon heeft een uniek kloonnummer (bijv. FL03) om zo de planten administratief makkelijk uit elkaar te kunnen houden en de authenticiteit van de plant/kloon te garanderen. Deze nr's staan in het veld "code" van de kweeklijst. Tevens geven wij de herkomst en historie aan in het veld "origin". Om te voorkomen dat u dezelfde plant per ongeluk elders weer koopt.
